# Python Continue Statement

# The continue statement in Python is a loop control statement that skips the rest of the code ins
# which executed, the code following continue in the loop is not executed for that iteration. Examp

for i in range(1, 11):
    if i == 6:
        continue
    print(i, end=" ")
```

```
1 2 3 4 5 7 8 9 10
```

```
# Examples
# Example 1: Skipping specific characters in a string

for char in "GeeksforGeeks":
    if char == "e":
        continue
    print(char, end=" ")
```

```
G k s f o r G k s
```

```
# Example 2. Using continue in nested loops

a = [[1, 2, 3], [4, 5, 6], [7, 8, 9]]

for row in a:
    for num in row:
        if num == 3:
            continue
        print(num, end=" ")
a = [[1, 2, 3], [4, 5, 6], [7, 8, 9]]

for row in a:
    for num in row:
        if num == 3:
            continue
        print(num, end=" ")
```

```
1 2 4 5 6 7 8 9 1 2 4 5 6 7 8 9
```

```
# Example 3. Using continue with a while loop

i = 0
while i < 10:
    if i == 5:
        i += 1  # ensure the loop variable is incremented to avoid infinite loop
        continue
    print(i)
    i += 1
i = 0
while i < 10:
    if i == 5:
        i += 1  # ensure the loop variable is incremented to avoid infinite loop
        continue
    print(i)
    i += 1
```
